

HAWCO
PRODUCTS LTD.

CUTLERY PRESOAKING PROCEDURES

1

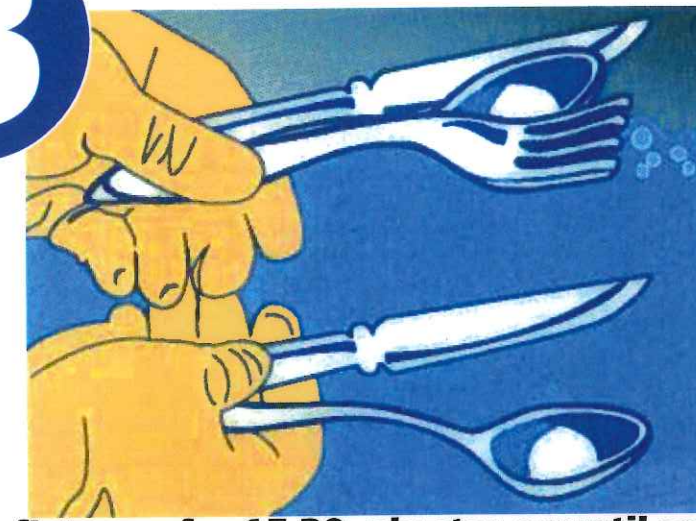

Mix product in warm water 45-60°C (110-140°F)
BEFORE adding cutlery.

2

Remove heavy food soil

3

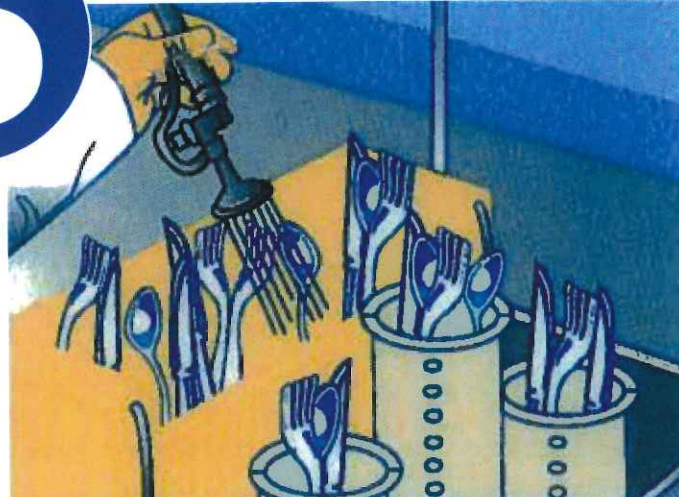

Soak flatware for 15-20 minutes or until soil is loosened. Change presoak solution when cold water and / or dirty.

4

After pre-soaking, load cutlery, unsorted, into vertical baskets with handles down or place in flat rack for washing. DO NOT LOAD VERTICAL BASKETS TOO TIGHTLY

5

Spray to remove pre-soak solution and loosened soil. This helps prevent foam from developing in the dish machine.

6

When clean cutlery is cool and dry, transfer to horizontal sorting bins or vertical baskets with HANDLES UP.
