GLASS RACK SIZING GUIDE

INSTRUCTIONS TO DETERMINE PROPER COMPARTMENT SIZE:

- 1. Place glass upside down on top of the middle circle of the sizing guide; center of the glass (or the stem on stemware) should be over the center of the guide.
- 2. Look down on the base of the glass. Note the smallest square that the largest diameter of the glass fits within. This will determine the number of compartments.
- 3. To determine height of rack, place glass on side. Align the base of the glass at 0in on the vertical ruler guide on the left-hand side of the page.
- 4. Note where the lip of the glass lines up against the measurements. Use this measurement for the table on the next page.
- 5. Our unique OptiClean Warewashing rack system allows you to build the perfect rack for any application. Glasses with a maximum height exceeding 10 1/2in will need more than five extenders. Custom racks requiring more than five extenders are available for order by contacting a CFS Brands customer service representative. Each extender adds approximately 11/2in of additional height to the inside compartment of the rack. For glasses with a maximum diameter exceeding 6in, We recommend using the RTP peg rack. The RTP peg rack can be custom ordered to accommodate any glass height.
- 6. Please contact your CFS Brands representative to place your order, or for more information about building the ideal rack for your needs.

GLASS RACK SIZING GUIDE

OPTICLEAN™ RACKS

OptiClean Racks are designed for optimal performance and efficiency.

Their durable honeycomb structure provides exceptional strength while their open wall design allows for superior water and soap flow.

To find the OptiClean rack that best fits your needs, please consult the tables on pages 255-258 and follow these instructions:

- 1. Determine whether you want all one color (Section 1) or a color-coded glass rack (Section 2).
- 2. Utilize the measurements from "Instructions to Determine Proper Compartment Size" or the dimensions (height and diameter) of your glassware.
- 3. Locate the corresponding height in the left column of the table.
- 4. Find the corresponding diameter in the top row of the table.
- 5. Find the cell where the height and diameter intersect.
- If the cell contains a single product number, that's the rack you should order.
- 7. If the cell contains two product numbers joined by a plus sign, you'll need to order both products to accommodate your glassware.
- 8. If any product number is prefaced by a number in parentheses, that indicates the quantity needed. For example, if the intersecting cell shows "RG4914 + (2x) RE4914," it means you should order one unit of product RG4914 and two units of product RE4914.

BRISTLE MATERIAL GUIDE - SYNTHETIC BRISTLES

Synthetic Corn

Excellent chemical resistance. X-shaped bristle allows for superior sweeping on carpeting and entry mats. Ability to sweep liquids and dry debris. Superior longevity versus natural corn. Sustains temperatures up to 225°F.

Synthetic Palmyra

An ideal substitute with all the inherent properties of natural Palmyra. Bristle material has superior chemical resistance to acids, oil, fungus, and bacteria growth and withstands temperatures up to 225°F. A superior alternative that exceeds natural bristle performance.

Nylon

Excellent abrasion resistance, shear/break strength, and bristle bend recovery. Very good chemical resistance and sustains temperatures up to 350°F. Best choice for abrasive, rough use.

Nylon Grit

Nylon filament with silicone carbide in each bristle, designed for use in general light scrubbing to heavy-duty scrubbing and stripping. Nylon grit cleans floors faster and reaches into grout lines for thorough cleaning.

Aggressive Nylon Grit

An extra aggressive nylon filament bristle material with silicon carbide grit for scrubbing heavily soiled floor surfaces.

Polyester

Excellent chemical resistance, ultra violet light resistance, and bristle bend recovery. Very good abrasion resistance, and tear/break strength. Sustains temperatures up to 125°F. Best choice for all around use and for extreme exposure to cleaning chemicals.

Polypropylene

Excellent chemical resistance to acids, oils, fungus, and bacteria growth. Good abrasion resistance and shear/break strength. Sustains temperatures up to 225°F. Best choice as an economical synthetic foodservice alternative to natural fibers.

Flagged Polystyrene

A specially-treated type of polystyrene that has excellent bristle bend recovery and tear/break strength. Very good chemical resistance and fine bristle tip design resists matting for use up to 180°F. Best choice for floor sweeps and brooms.

Polystyrene

Has excellent bristle bend recovery and tear/break strength. Very good chemical resistance for general use up to 180°F. Best choice for floor sweeps and brooms.

Teflon©

Excellent heat resistance, abrasion resistance, and shear/break strength. Very good chemical resistance and bristle bend recovery. Sustains temperatures up to 500°F Best choice for high heat uses.

BRISTLE MATERIAL GUIDE - NATURAL BRISTLES

Horsehair

A natural pointed tip, good shear/break resistance, and soft cleaning properties. Good durability and excellent blending properties make this an ideal choice for interior floor sweeps when blended with other fibers.

Boar Bristle

Bleached and sterilized bristles can withstand temperatures of up to 500°F. Double boiling process ensures integrity of bristles over long life. Natural taper and split ends of boar bristle make this one of the best choices for high heat basting.

Bassine Fiber

Natural stiff and coarse fibers from India palms is a classic choice for heavy floor cleaning.

Bass Fiber

Natural African Bass Fiber is coarse, stiff, and provides good flexibility for use in upright floor sweeps and as a blend with other fibers for other applications.

Palmyra

Natural medium stiff fibers from India palms is an excellent choice for general floor sweeps. Provides good durability and bristle recovery.

Tampico

Natural Tampico fiber from the Mexican agave plant is a soft to medium soft bristle with very good durability. Good choice for finer floor sweeps and general cleaning scrub brushes.

Stainless Steel Wire

Rust proof, excellent chemical resistance, excellent bend recovery, and provides a high degree of abrasion and wear resistance. Best foodservice choice for aggressive cleaning on grills and other heavily soiled foodservice equipment.

Carbon Steel Wire

Provides a high degree of abrasion and wear resistance. Good bend recovery. Best choice for aggressive cleaning on grills and other heavily soiled equipment.

Brass Wire

Rust resistant, provides a high degree of abrasion but is softer than stainless steel or carbon steel to prevent equipment damage. For use on ovens, griddles, and other metal equipment that is heavily soiled but cannot sustain heavy scratches.

BRISTLE MATERIAL GUIDE - SYNTHETIC BRISTLES

Synthetic Corn

Excellent chemical resistance. X-shaped bristle allows for superior sweeping on carpeting and entry mats. Ability to sweep liquids and dry debris. Superior longevity versus natural corn. Sustains temperatures up to 225°F.

Synthetic Palmyra

An ideal substitute with all the inherent properties of natural Palmyra. Bristle material has superior chemical resistance to acids, oil, fungus, and bacteria growth and withstands temperatures up to 225°F. A superior alternative that exceeds natural bristle performance.

Nylon

Excellent abrasion resistance, shear/break strength, and bristle bend recovery. Very good chemical resistance and sustains temperatures up to 350°F. Best choice for abrasive, rough use.

Nylon Grit

Nylon filament with silicone carbide in each bristle, designed for use in general light scrubbing to heavy-duty scrubbing and stripping. Nylon grit cleans floors faster and reaches into grout lines for thorough cleaning.

Aggressive Nylon Grit

An extra aggressive nylon filament bristle material with silicon carbide grit for scrubbing heavily soiled floor surfaces.

Polyester

Excellent chemical resistance, ultra violet light resistance, and bristle bend recovery. Very good abrasion resistance, and tear/break strength. Sustains temperatures up to 125°F. Best choice for all around use and for extreme exposure to cleaning chemicals.

Polypropylene

Excellent chemical resistance to acids, oils, fungus, and bacteria growth. Good abrasion resistance and shear/break strength. Sustains temperatures up to 225°F. Best choice as an economical synthetic foodservice alternative to natural fibers.

Flagged Polystyrene

A specially-treated type of polystyrene that has excellent bristle bend recovery and tear/break strength. Very good chemical resistance and fine bristle tip design resists matting for use up to 180°F. Best choice for floor sweeps and brooms.

Polystyrene

Has excellent bristle bend recovery and tear/break strength. Very good chemical resistance for general use up to 180°F. Best choice for floor sweeps and brooms.

Teflon®

Excellent heat resistance, abrasion resistance, and shear/break strength. Very good chemical resistance and bristle bend recovery. Sustains temperatures up to 500°F. Best choice for high heat uses.

BRISTLE MATERIAL GUIDE - NATURAL BRISTLES

Horsehair

A natural pointed tip, good shear/break resistance, and soft cleaning properties. Good durability and excellent blending properties make this an ideal choice for interior floor sweeps when blended with other fibers.

Boar Bristle

Bleached and sterilized bristles can withstand temperatures of up to 500°F. Double boiling process ensures integrity of bristles over long life. Natural taper and split ends of boar bristle make this one of the best choices for high heat basting.

Bassine Fiber

Natural stiff and coarse fibers from India palms is a classic choice for heavy floor cleaning.

Bass Fiber

Natural African Bass Fiber is coarse, stiff, and provides good flexibility for use in upright floor sweeps and as a blend with other fibers for other applications.

Palmyra

Natural medium stiff fibers from India palms is an excellent choice for general floor sweeps. Provides good durability and bristle recovery.

Tampico

Natural Tampico fiber from the Mexican agave plant is a soft to medium soft bristle with very good durability. Good choice for finer floor sweeps and general cleaning scrub brushes.

Stainless Steel Wire

Rust proof, excellent chemical resistance, excellent bend recovery, provides a high degree of abrasion and wear resistance. Best foodservice choice for aggressive cleaning on grills and other heavily soiled foodservice equipment.

Carbon Steel Wire

Provides a high degree of abrasion and wear resistance. Good bend recovery. Best choice for aggressive cleaning on grills and other heavily soiled equipment.

Brass Wire

Rust resistant, provides a high degree of abrasion but is softer than stainless steel or carbon steel to prevent equipment damage. For use on ovens, griddles, and other metal equipment that is heavily soiled but cannot sustain heavy scratches.

WET MOPPING GUIDE

GENERAL MOPPING

Choose mops with high absorbency, release and durability. If laundering facilities are available, it is beneficial to take advantage of launderable mops to save money. For performance and durability choose a synthetic blend or rayon mop with looped end and woven tailbands.

YARN

- It is important to choose the right mop in order to get maximum efficiency
- Some yarns naturally perform specific cleaning tasks better than others

YARN PLY

- Yarn ply is the number of strands twisted together to make a single yarn strand
- Although more plies give added strength, it does not always mean higher quality yarn
- More strands can add durability, but they decrease absorbency
- It is better and more cost effective to choose a higher quality yarn than a high ply, low-quality yarn

TWIST

- The "twist" of a yarn is a result of how tightly the fiber strands are wound together
- A tightly twisted yarn might have more strength and last longer, but it can have less absorbency
- The best choice is determined by the type and quality of the yarn, as well as the mop's construction
- Mops with looped-end construction allow the yarn to have a loose twist without the fraying

FINISH MOPPING

For finish mopping applications look for a rayon or synthetic mop. These mops offer high absorbency and release. To make sure you are achieving maximum floor coverage with minimal streaking, choose a tailband and looped-end yarn.

Advantages

Good absorption & retention with limited shrinkage & a low initial Break-in period required. Slow drying yarn leads to mildew

& deterioration

Lints

Disadvantages

Designed for general use. Scrubbing & cleaning up liquids.

Use

Synthetic

Cotton

Long stable fiber offers excellent tensile strength without linting.

Higher cost. Poor absorption.

Rough surfaces.

Cotton Synthetic Blend Excellent choice for performance, price & durability. Synthetic fiber offers durability & color options.

Possible shrinkage Requested by professionals who require a better, longer lasting mop.

Rayon

Absorbs quickly with easy release. Dries fast & is mildew resistant. Cleaner yarn with less linting.

Shrinks when laundered and has less liquid retention.

Use for applying liquids such as disinfectant or floor finishes.

The majority of our mops are made with recycled material.

BAND STYLES

Wide Band Vinyl coated mesh – 5in width

Narrow Band Textured polyester tape – 1.25in width

Screw Top Textured polyester tape with a metal screw on attachment – 1.25in width

Handle - Quick Change/Release

Handle - Screw In

Handle — Jaw Style

WET MOPPING GUIDE

SIZES ARE INDICATED BY TAILBAND COLOR

CUT-END OR LOOPED-END

Cut-End

- · Cut-end mops are the most popular
- · Low purchase price compared to looped-end
- · Cannot be laundered
- · Cover less area per pass when mopping

Looped-End

- Superior performance and lasts longer than cut-end mops
- Launderable
- Tailband style gives better mopping coverage
- Looped ends prevent fraying and unraveling so you can achieve reduced labor costs and replace mops less often
- Although the initial investment is more than a cut-end style, the life expectancy makes looped-end mops a more economical choice

BRICK PACKS

Mops that are available in brick packs reduce cube up to 62%.

Item numbers ending with a "B" are sold in brick packs.

WET MOPPING GUIDE

HOW WE RATE OUR MOPS

ABSORBENCY

The absorbency of a mop refers to the ability to pick up and retain liquid. Higher levels allow faster floor drying times, leading to greater productivity and safety. Rayon and cotton yarns have the highest absorbency.

DURABILITY

Mop durability is a measure of how long it will last or perform before needing replacement. Synthetic and blended mops are the most durable.

RELEASE/RETENTION

Release is the ability of a mop to disperse liquid onto the floor or during wringing. Higher levels allow faster and more complete wringing, as well as more efficient application of cleaning solutions on the floor.

LAUNDERABILITY

The launderability is based on the number of washing cycles it can withstand before the construction of the mop is degraded. Synthetic and blended fiber mops have the highest levels of launderability.

SYNTHETIC/COTTON BLEND LOOPED-END

- Maximum durability
- 50-75 uses per mop
- S, M, and L are available in brick packs
